

As an Internet service provider (“ISP”) Winnebago Cooperative Telecom Association (“WCTA”) invests significant resources to bring Internet access to our customers and strives to provide customers an optimum online experience that enables them to access all available and lawful online content and services. The purpose of this document is to disclose information regarding WCTA’s network management practices, performance, and commercial terms of its broadband Internet access service, sufficient for consumers to make informed choices regarding use of such services and for content, application, service, and device providers to develop, market, and maintain Internet offerings, consistent with applicable federal regulations.

In delivering broadband Internet access services, WCTA may utilize wholesale or other “upstream” providers. This Network Management Policy is specific to WCTA’s network and network management practices, and services may also be subject to the network performance and network management policies of our upstream providers.

NETWORK MANAGEMENT PRACTICES

General. High-speed bandwidth and network resources are limited and managing the network is essential to promote the use and enjoyment of the Internet by all of our customers. WCTA is committed to providing the best online experience possible for all of its customers and uses reasonable network management practices to ensure that our services are used in ways that are consistent with the specifications of a shared network. The network management practices used by WCTA are consistent with industry standards. For example, we use tools and practices to reduce the negative effects of spam, viruses or other harmful code or content, security attacks, network congestion, and other risks and degradations of the service. By engaging in reasonable and responsible network management, WCTA can deliver the best possible broadband Internet experience to all of its customers.

The primary features of WCTA’s network management practices are:

- **WCTA does not block, throttle, or inhibit any lawful content, specific applications or classes of applications.**
- **WCTA does not restrict the types of devices that can be connected to its network.**
- **WCTA does not engage in paid prioritization or affiliate prioritization.**

Congestion Management. WCTA monitors its network on a continual basis to determine if an area of congestion could occur. The area of possible congestion will be identified and network improvements will attempt to be made prior to any congestion occurring. These network improvements may include: the addition of network hardware or network segregation to accommodate additional traffic. If a period of congestion occurs, customers may experience things like: longer times to download or upload files, surfing the Web may seem somewhat slower, or playing games online may seem somewhat sluggish. WCTA does not manage congestion based on the online activities, protocols or applications a customer uses; it only focuses on the areas with the heaviest usage and works to alleviate any congestion prior to any customer impact. The purpose is to eliminate periods of congestion as quickly as possible.

Application or Content Specific Behavior. WCTA does not discriminate against particular types of lawful online content. WCTA provides its customers with full access to all the lawful content, services, and applications that the Internet has to offer. However, we are committed to protecting customers from spam, phishing, and other unwanted or harmful online content and activities. In that connection, we use industry standard tools and generally accepted practices and policies to help ensure that our customers are protected from unwanted or harmful content and activities. WCTA’s use of these tools, techniques and policies help to identify and restrict certain harmful and unwanted online content, such as spam or phishing Web sites. In other cases, these tools, techniques and policies may permit customers to identify certain content that is not clearly harmful or unwanted,

such as bulk email or Web sites with questionable security ratings, and enable those customers to inspect the content further if they want to do so.

Device Attachments. WCTA allows for customer owned equipment to be used on the network, so long as such devices do not interfere with the WCTA network or WCTA's ability to provide the services. Customer-owned devices are not supported or managed by WCTA.

Security. WCTA employs a number of practices to help prevent unwanted communications such as spam as well as protect the security of our customers and network. WCTA (directly or via upstream providers who may manage the necessary network hardware and/or software) limits the number of login, SMTP, DNS, and DHCP transactions per minute (at levels far above "normal" rates) that customers can send to WCTA's servers in order to protect them against Denial of Service (DoS) attacks. We do not disclose the exact rate limits in order to maintain the effectiveness of these measures, which ensure that these critical services are available for all of our customers. In order to further protect our customers, WCTA blocks a limited number of ports that are commonly used to send spam, launch malicious attacks, or steal a customer's information, for example, SQL Exploits and Microsoft communication protocol ports. In addition, WCTA conducts several security initiatives, and offers security tools for our customers, such as DoS monitoring and Virus Scanning software.

SERVICE PERFORMANCE

Service Technology. WCTA provides broadband Internet access utilizing fiber and DSL technologies.

Advertised Speeds. WCTA provides a variety of high speed Internet service packages, with different speed tiers as shown in the "Broadband Plans" section of this policy. WCTA advertises its speeds as "up to" a specific level based on the tier of service to which a customer subscribes, and WCTA engineers its network to ensure that its customers can enjoy the speeds to which they subscribe. However, WCTA does not guarantee that a customer will actually achieve those speeds at all times. In the absence of purchasing an expensive, dedicated Internet connection, no ISP can guarantee a particular speed at all times to a customer.

Actual Speeds and Latency. The "actual" speed that a customer will experience while using the Internet depends upon a variety of conditions, many of which are beyond the control of any ISP. These conditions include:

- Performance of a customer's computer or device, including its age, processing capability, its operating system, the number of applications running simultaneously, and the presence of any adware and viruses. You should make sure you are running the most up-to-date operating system your computer or other Internet connected device can handle (with all available patches installed) to maximize your connection speeds.
- Type of connection between a customer's computer and modem. If there is a wireless router between your modem and your Internet connected device, the connection speed you experience can often be slower than direct connections into a router or modem, and depends on the model and configuration of the router that you use. Certain routers are able to pass data to your Internet connected device more quickly than others. Wireless connections also may be subject to greater fluctuations, interference and congestion. Wireless modem connections used with higher speed tiers may be particularly impacted, as many wireless connections do not perform at the speeds delivered by these tiers.
- The distance packets travel (round trip time of packets) between a customer's computer and its final destination on the Internet, including the number and quality of the networks of various operators in the transmission path. The Internet is a "network of networks." A customer's connection may traverse the

networks of multiple providers before reaching its destination, and the limitations of those networks will most likely affect the overall speed of that Internet connection.

- Congestion or high usage levels at the website or destination. If a large number of visitors are accessing a site or particular destination at the same time, your connection will be affected if the site or destination does not have sufficient capacity to serve all of the visitors efficiently.
- Gating of speeds or access by the website or destination. In order to control traffic or performance, many websites limit the speeds at which a visitor can download from their site. Those limitations will carry through to a customer's connection.
- The performance of modems or other equipment installed at your premises. Modem performance may degrade over time, and certain modems are not capable of handling higher speeds. Our highest speed services may be particularly impacted by computer and communications limitations. We encourage you to promptly contact WCTA customer service if you have any concerns about your modem performance or speed capabilities.

Real Time Applications. WCTA offers a variety of service packages, with different speeds. For each of these packages, WCTA utilizes service technologies with latency characteristics suitable for real-time applications such as voice communication or video streaming services.

Customer Speed Test. WCTA offers its customers the ability to test the speeds that they are receiving on WCTA's network from the customer's computer to a test site on WCTA's network. Simply go to the speed test site for your service location to test your connection at: <http://speedtest.wctatel.net/>. Please note that this and other commercially available speed tests are dependent on several of the factors outlined above, especially the customer's Wi-Fi network. Therefore, these tests do not necessarily reflect the performance of the WCTA network alone.

Impact of Non-Broadband Internet Access Services. WCTA does not currently offer other data services that affect the last-mile capacity or performance of our broadband Internet access services.

COMMERCIAL TERMS

Service Packages. WCTA offers a variety of service packages, which include pricing for Internet services that vary depending upon the plan and whether the services are bundled with WCTA's other service offerings. Please see below for monthly pricing information for our currently available service packages:

Broadband Plans:

	<u>Upload</u>	<u>Download</u>	<u>Price</u>
25M Only – Fiber	25Mbps	25Mbps	\$40.00
500M Only – Fiber	500Mbps	500Mbps	\$75.00
1000M (1 gig) Only – Fiber	1000Mbps	1000Mbps	\$100.00

WCTA generally does not limit the amount of usage (by imposing specific data caps) or impose usage-based fees. WCTA also does not impose fees for early termination.

Privacy and Other Policies. In addition to this Network Management Policy, WCTA’s broadband Internet access services are subject to WCTA’s Privacy Policy, WCTA’s Acceptable Use Policy and WCTA’s IA Terms of Service, the most recent versions of which are located at www.wctatel.net

Redress Options. If you have questions, concerns or inquiries regarding this Network Management Policy, or customer redress options, please contact WCTA at: 641-592-6105 or wcta@wctatel.net.
